Leather Processing Technology

Tanning Drum

In India, Annual production of finished leather is 2 billion Sq.ft. which accounts for 10% of world leather requirement (IILF,2014).

KILT is providing skilled manpower and appropriate technologies for the production of variety of Finished Leathers. KILT is having an advanced Leather processing dept. where the students will have hands on experience to learn how to convert a hide to finished Leather of various types.

Tanning has a concern of potential Environmental & Health hazard, so KILT has contributed in providing eco-friendly processing technologies for the reduction of pollution loads due to social and environmental implications.
